## Senior Design Engineer for Cabin & Cargo (m/f/d)

<b>Place of work</b>	<b>Contract Type</b>	<b>Job Number</b>	324_202602_001
Oberpfaffenhofen, DE	AÜG, Permanent	<b>Work start:</b>	asap

We are seeking a senior aerospace expert with proven leadership in certification-relevant Cabin and Cargo systems across full aircraft development cycles.

This is not a coordination role, but a position intended for engineers operating at the highest technical level within certification-critical program environments.

The role requires deep regulatory expertise, strong system integration capability, and the confidence to assume full technical authority and decision-level accountability.

### Your Responsibilities

You will act as technical owner for Cabin & Cargo deliverables within an aircraft program environment, including:

- End-to-end responsibility from concept definition to certification and entry into service
- Technical sign-off accountability within regulated aerospace frameworks
- Ownership of compliance demonstration (CS/FAR 25 environment)
- Strategic supplier down-selection and qualification governance
- High-impact trade-off decisions (weight, cost, reliability, certification)
- Resolution of critical in-service and development design issues
- Cross-functional leadership across design, stress, systems, manufacturing and certification

### Your educational Background:

Master's Degree or Diplomingenieur in Aerospace Engineering or equivalent

### Your professional Experience:

- Minimum 10+ years aviation industry experience
- Minimum 7+ years direct Cabin Interior system responsibility
- Proven leadership of certification-relevant deliverables within aircraft programs
- Demonstrated experience in regulatory compliance (CS-25 / FAR 25)
- Experience operating within structured aerospace approval environments (e.g., DOA or equivalent)
- Strong background in supplier technical governance and selection
- Experience resolving complex fleet in-service issues
- EU work authorization or valid German work permit for immediate employment

### Your Mindset

You are comfortable making technically binding decisions under regulatory constraints.

You have defended compliance positions in front of certification authorities. You have carried accountability for cabin deliverables impacting aircraft safety and program milestones.
